Harriston

Pick Planter

Large Seed Bowl and Picker Wheel

With the pick wheels on the outside of the bowl, there is no bridging. A level sensor controls the amount of seed in the bowl. The heavy duty cast pick arm assemblies and large cam bearings provide years of service. Twenty four arms per row provide accuracy at higher planting speeds

Harriston Hydraulic Drive

The Harriston Hydraulic Drive unit offers many features including easy on-the-fly seed spacing adjustment, seed bowl height control, and planting efficiency. Precision planting has never been this easy!

Trusted Design

The Harriston Pick Planter has stood the test of time. While the technology has been updated, the design has stayed relatively the same. When using a Harriston Pick Planter a farmer can trust that the simple, proven, reliable, and rugged Harriston design will get the job done right.
